HARGIS INSTRUMENTS

The Honburg version of Hargis instruments are not implied to be an exact version of any other system, nor do we claim any endorsement of Dr. Hargis.

F60

INSTRUMENTS
CRANIO-MAXILLO-FACIAL SURGERY

CLAMP CORONOID SELF-RETAINING

For a positive retraction of the tissues on the anterior border of the ramus of the mandible, it eliminates much of the fatigue and tedium of the mid-sagittal osteotomy. It maintains its position during procedure and safeguards against trauma of rotary instrument to soft tissues.

Hargis

Complete with chain	190 mm / 7 1/2"	F60-265-19R
Chain only		F60-265-99R

ELEVATOR PEIORSTEAL, SCALLOPED

Heavy model periosteal elevator, sharp tip, blunt sides.

Hargis

10 x 22 mm	180 mm / 7"	F60-268-18R
------------	-------------	-------------

OSTEOTOMES PTERYGOID

For use between the tuberosity of the maxilla and the pterygoid plates of the sphenoid bone, it minimizes any risk of damage to the buccal fat pad and the muciperiosteal flap during surgery.

Fig. 1
8mm

Fig. 2
10mm

Hargis

Fig. 1	220 mm / 8 3/4"	F60-275-08R
Fig. 2	220 mm / 8 3/4"	F60-275-10R

OSTEOTOMES SAGITTAL SPLIT (SSO)

For sagittal split osteotomy, its wide and taper blades reduce the frequency of accidental fractures of buccal plate and there is no need of using two osteotomes simultaneously.

Fig. 1
10 x 20 mm

Fig. 2
20 x 14 mm

Hargis

Fig.1	215 mm / 8 1/2"	F60-277-10R
Fig.2	215 mm / 8 1/2"	F60-277-20R

■ RETRACTOR LIP AND CHEEK

For wide exposure of oral operative sites, this retractor effectively protects commissures of the lip from trauma.

Hargis

180 mm / 7"

F60-281-18R

■ RETRACTOR MANDIBULAR BODY

For making the vertical cut of the mid-sagittal osteotomy, it distends the cheek, protects the facial artery and vein, supports the mandible as the osteotomes are struck with a mallet and permits an adequate cut of the inferior border of the mandible.

Hargis

175 mm / 6 7/8"

F60-383-17R

■ RETRACTORS MEDIAL RAMUS

For protecting major blood vessels and soft tissue, this retractor allows easy insertion, adequate access and visibility of the osteotomy site.

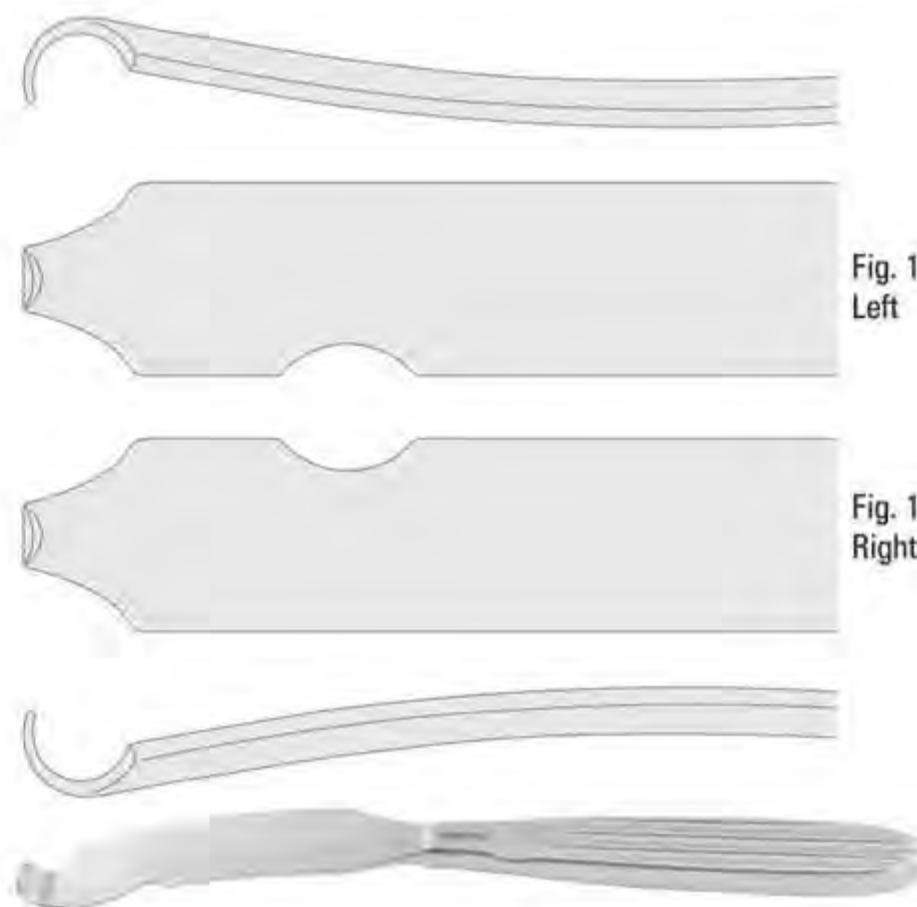

Fig. 1
Left

Fig. 1
Right

Hargis

Fig. 1

195 mm / 7 3/4"

F60-285-01R

Fig. 1

195 mm / 7 3/4"

F60-285-02R

■ RETRACTOR PIRIFORM RIM

For positive engaging of the lateral aspect of the rim of the piriform fossa of the nose, it protects posterior buccal soft tissues and nasal mucosa during and after operation.

Hargis

185 mm / 7 1/4"

F60-287-18R

KREKMANOV INSTRUMENTS

The Honburg version of Krekmanov instruments are not implied to be an exact version of any other system, nor do we claim any endorsement of Dr. Krekmanov.

F60

INSTRUMENTS
CRANIO-MAXILLO-FACIAL SURGERY

■ DISSECTOR PERIOSTEAL

For dissection of nasal floor, it can also be placed under nasal mucosa to prevent undue trauma during osteotomy.

Krekmanov

4 / 9 mm 240 mm / 9 1/2" F60-351-24R

■ DISSECTOR PERIOSTEAL

For easy dissection of the medial pterygoid muscle attachment, it is suitable for simultaneous dissection of masseter muscle in the case of inferior repositioning of the maxilla.

Krekmanov

3 mm 220 mm / 8 3/4" F60-353-22R

■ ELEVATOR PERIOSTEAL GROOVED

For placing in the periosteal pocket with its curved tip behind the lingua and the rest of grooved blade to keep the periosteal sac open.

Krekmanov

9 mm 200 mm / 8" F60-355-20R

■ ELEVATORS PERIOSTEAL

For subperiosteal dissection from the pterygoid junction in the tube area to the anterior nasal spine.

Fig.2	170 mm / 6 3/4"	F60-361-02R

■ MALLET SLOTTED

For use with Krekmanov osteotomes, its slotted head will serve to remove an impacted osteotome. May also used as a conventional mallet. Fully autoclavable.

Krekmanov

25 mm Ø	190 mm / 7 1/2"	F60-366-19R
Spare plastic disks (pair)		F60-366-99R

■ MOBILIZERS MANDIBULAR SEGMENTAL

Mandibular segmental mobilizers instructions for use:

Step 1

The cortical layer is cut in accordance with treatment plan.

Step 2

A segmental mobilizer is placed in the anterior vertical cut and another in horizontal cut below the alveolar margin.

To separate the segments, these are bended away from each other by applying simultaneous force on the two mobilizers.

Step 3

The distal segment is separated from the proximal one.

Krekmanov

Fig. 1	170 mm / 6 3/4"	F60-368-01R
Fig. 2	170 mm / 6 3/4"	F60-368-02R

200 mm / 8"

F60-808-20R

PUNCHES NASAL SADDLE

For reducing the angle between the nose and the forehead, the saddle punch will cautiously remove small pieces of bone.

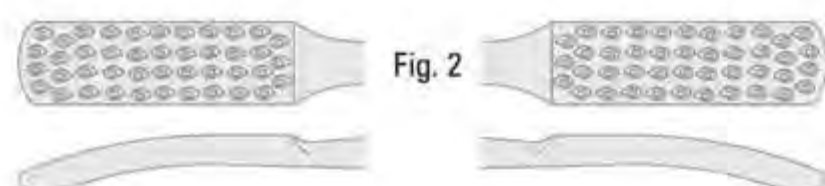

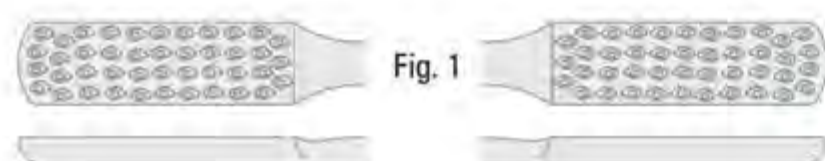

Obwegeser

4 mm	205 mm / 8 1/8"	F60-821-04R
6 mm	205 mm / 8 1/8"	F60-821-06R
8 mm	205 mm / 8 1/8"	F60-821-08R

RASPS NASAL

For smooth finishing the bone surfaces in nasal surgery, these are available in fine and medium grits with perforations through which the chips of bone are dispensed and rasp is not clogged. One side will cut when pushed and the other when pulled. Blades are flat, convex and roof-shaped.

RETRACTORS CHANNEL

For protection of soft tissue and neurovascular bundle during sagittal split of the mandible. Useful for retracting and improving view of the surgical site in the mandibular neurovascular bundle decompression procedure. The narrow channel retractor is used over the lingual aspect of the mandible and the wider one for buccal osteotomy and removal

Obwegeser - Model 1

8 mm	165 mm / 6 1/2"	F60-851-08R
10 mm	165 mm / 6 1/2"	F60-851-10R

Obwegeser - Model 2

10 mm	160 mm / 6 1/4"	F60-853-10R

RETRACTOR CHEEK AND LIP

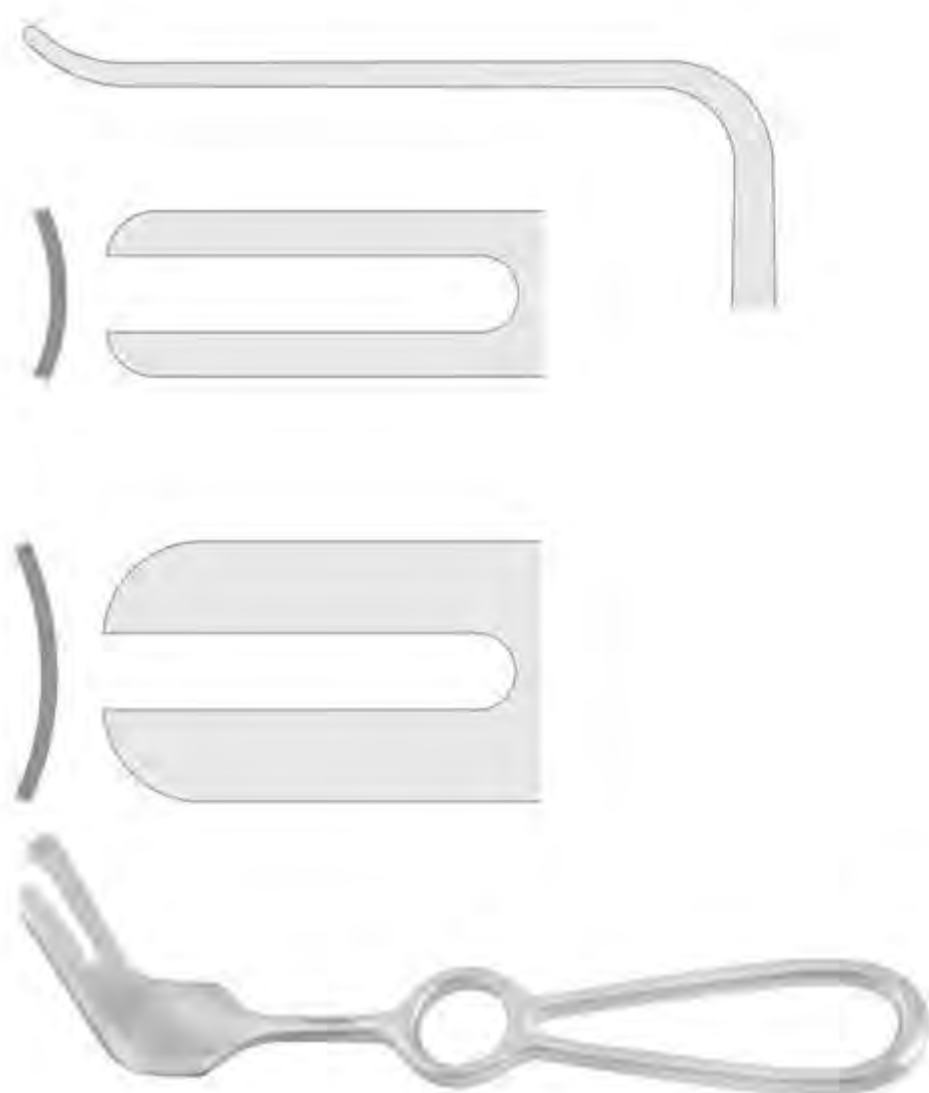

For retraction of soft tissue of cheek and lip, its Z-shape is convenient and practical for the job.

Obwegeser		
30 x 40 mm	120 mm / 4 3/4"	F60-861-12R

RETRACTORS CHEEK

For retraction and protection of cheek during osteosynthesis by plates and screws, the concave blade minimizes traumatizing of soft tissue. The perfacial instrument is pushed through the slit blade.

Obwegeser		
60 x 14 mm	160 mm / 6 1/4"	F60-867-14R
60 x 22 mm	160 mm / 6 1/4"	F60-867-22R

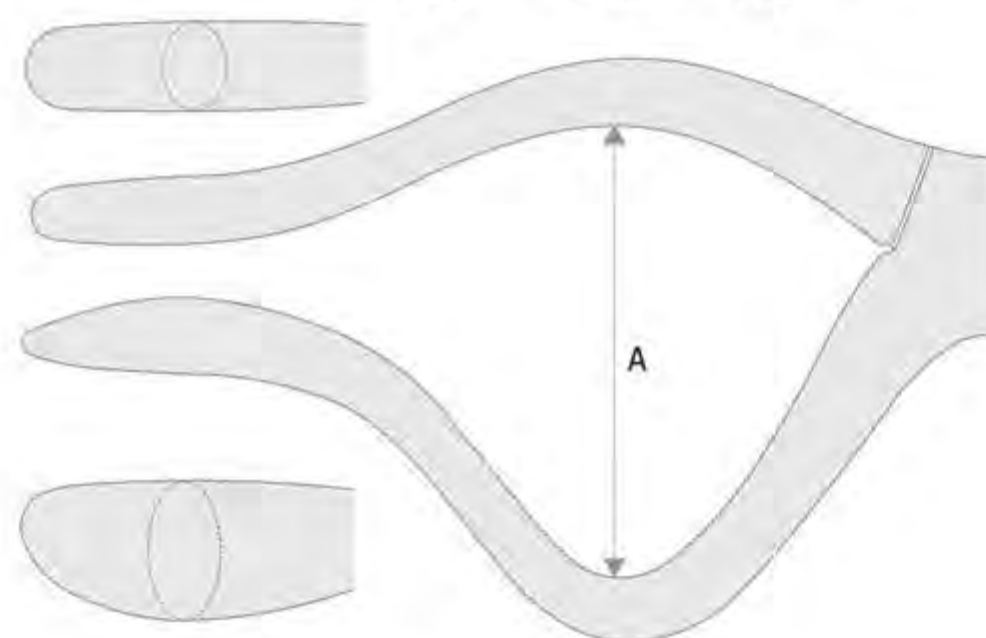

Fig. 1	200 mm / 8"	F62-069-01R
Fig. 2	200 mm / 8"	F62-069-02R

■ FORCEPS DISIMPACTION

For maxillary advancement in Le Fort I, II or III procedures. The forceps are side specific and used in pair. They allow the application of great amounts of force to disimpact and reposition the maxilla and midface. The maxillary fracture is completely mobilized and an attempt should be made to make the fragment as passive as possible. This may require an up-down and side-to-side movement of the forceps. Oral blade of forceps has large curvature to prevent damage to upper anterior dentition.

RETRACTOR NASAL BRIDGE

For retraction of the soft tissue overlying the glabellar and nasal bridge in cases of exposure with bifrontal/bitemporal flap.

Sailer

50 x 15/20 mm	235 mm / 9 1/4"	F62-195-23R
---------------	-----------------	-------------

RETRACTOR NASAL SPINE

For safe placement anterior to the nasal septum in the nasal soft tissues for cases of Le Fort I osteotomies.

Sailer

Blunt	190 mm / 7 1/2"	F62-197-19R
-------	-----------------	-------------

RETRACTORS SOFT TISSUE

Bent downward, concave blades.

For retraction of the upper lip, while the surgeon is positioned posterior to the head of the patient; these retractors are especially useful for Le Fort I osteotomies and cleft palate surgery.

The short retractors, held by the assistant, do not hinder the surgeon.

The concave blade minimizes traumatization of soft tissue and lips and the downward curved tip provides clear view.

RETRACTOR CHANNEL PEDIATRIC

For protection of soft tissue and neurovascular bundle during sagittal split of the mandible. Useful for retracting and improving view of the surgical site in the mandibular neurovascular bundle decompression procedure.

Steinberg

6.75 mm	165 mm / 6 1/2"	F62-275-16R
---------	-----------------	-------------

RETRACTOR MANDIBULAR BODY PEDIATRIC

For making the vertical cut of the mid-sagittal osteotomy, it distends the cheek, protects the facial artery and vein, supports the mandible as the osteotomes are struck with a mallet and permits an adequate cut of the inferior border of the mandible.

Steinberg

155 mm / 6 1/8"	F62-277-15R
-----------------	-------------

RETRACTORS RAMUS PEDIATRIC

For retraction of soft tissue from the anterior aspect of ascending ramus of the mandible, its concave blade minimizes trauma to lip.

Steinberg

50 x 8 / 11 mm	220 mm / 8 3/4"	F62-279-11R
60 x 9 / 13 mm	220 mm / 8 3/4"	F62-279-13R

STEINHAUSER INSTRUMENTS

The Honburg version of Steinhauser instruments are not implied to be an exact version of any other system, nor do we claim any endorsement of Dr. Steinhauser.

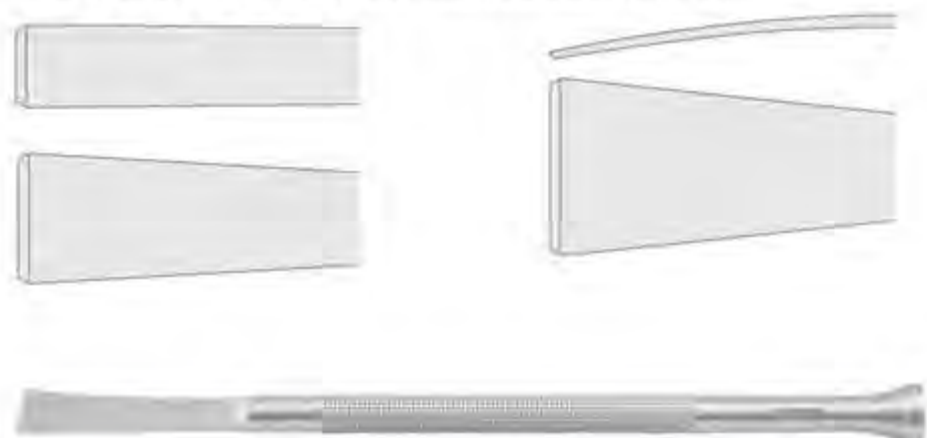

F62

INSTRUMENTS
CRANIO-MAXILLO-FACIAL SURGERY

■ CHISELS SAGITTAL SPLIT

For sagittal split osteotomies of the mandible. The flexible and specially beveled tip follows inner aspect of the buccal cortex and slides down closely following the buccal cortical wall so that it stays lateral to the neurovascular bundle.

Steinhauser

7 mm	190 mm / 7 1/2"	F62-301-07R
11 mm	190 mm / 7 1/2"	F62-301-11R
15 mm	190 mm / 7 1/2"	F62-301-15R

■ CLAMPS RAMUS

For sagittal splitting or decortication of lower jaw in osteomyelitis. These self-retaining clamps have cheek retractor on one of the blades to keep lingual soft tissue away from ascending ramus of mandible.

26 x 6 mm	170 mm / 6 3/4"	F62-313-26R

■ ELEVATOR PERIOSTEAL ORBITAL FLOOR, SEMI-SHARP

For circular dissection of the orbital periosteum.

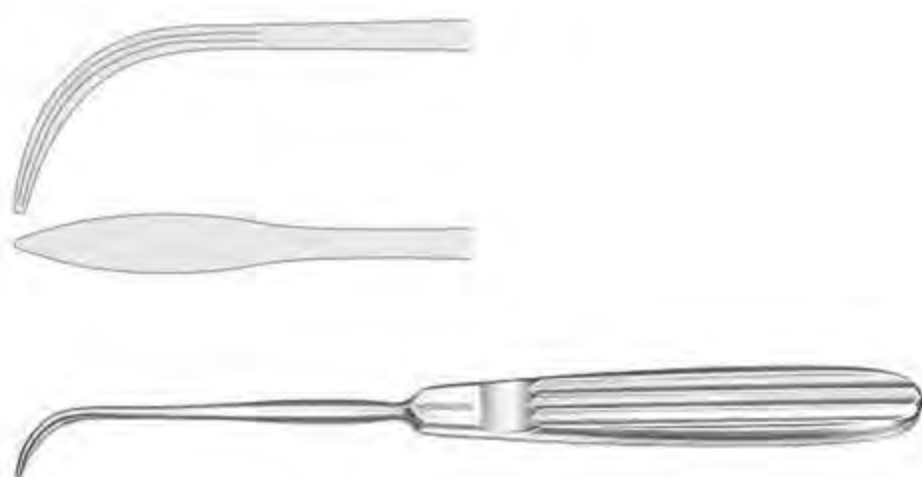

Steinhauser

3 mm	165 mm / 6 1/2"	F62-317-16R
------	-----------------	-------------

ELEVATOR – EXPLORER / DEPTH FEELER, BLUNT

For finding the depth of sigmoid notch and blunt dissection of soft tissue.

Steinhauser

5 mm	185 mm / 7 1/4"	F62-323-18R
------	-----------------	-------------

FORK REPOSITIONING

For repositioning the severed mandibular ramus into the articular fossa.

Steinhauser

6 mm	180 mm / 7"	F62-345-18R
------	-------------	-------------

FORCEPS BONE REPOSITIONING

Steinhauser

130 mm / 5 1/8"	F62-330-13R
-----------------	-------------

OSTEOTOMES ORBITAL FLOOR

For osteotomies of the orbital floor particularly in Le Fort II and Le Fort III.

Steinhauser

5 mm	175 mm / 6 7/8"	F62-355-05R
8 mm	175 mm / 6 7/8"	F62-355-08R

FORCEPS BONE REPOSITIONING

Steinhauser

130 mm / 5 1/8"	F62-331-13R

OSTEOTOMES RAMUS FLEXIBLE

Steinhauser

7 mm	170 mm / 6 3/4"	F62-357-07R
10 mm	170 mm / 6 3/4"	F62-357-10R

RETRACTORS CHEEK

For retraction and protection of cheek during osteosynthesis by plates and screws, the concave blade minimizes traumatizing of soft tissue. The perfacial instrument is pushed through the hole in blade.

Steinhauser

Left	235 mm / 9 1/4"	F62-365-01R
Right	235 mm / 9 1/4"	F62-365-02R

RETRACTOR MANDIBULAR CHANNEL

For sagittal split osteotomy of the ramus, this extra long channel retractor is designed particularly to be placed on the lingual aspect of the mandible. The retractor blade is malleable to provide an improved view.

Steinhauser

8 mm	270 mm / 10 3/4"	F62-371-27R
------	------------------	-------------

RETRACTOR MANDIBULAR CHANNEL

For sagittal split osteotomy of the ramus, this extra long channel retractor is designed particularly to be placed on the lingual aspect of the mandible. The retractor blade is malleable to provide an improved view and the serrated working end secures the retractor in the desired position.

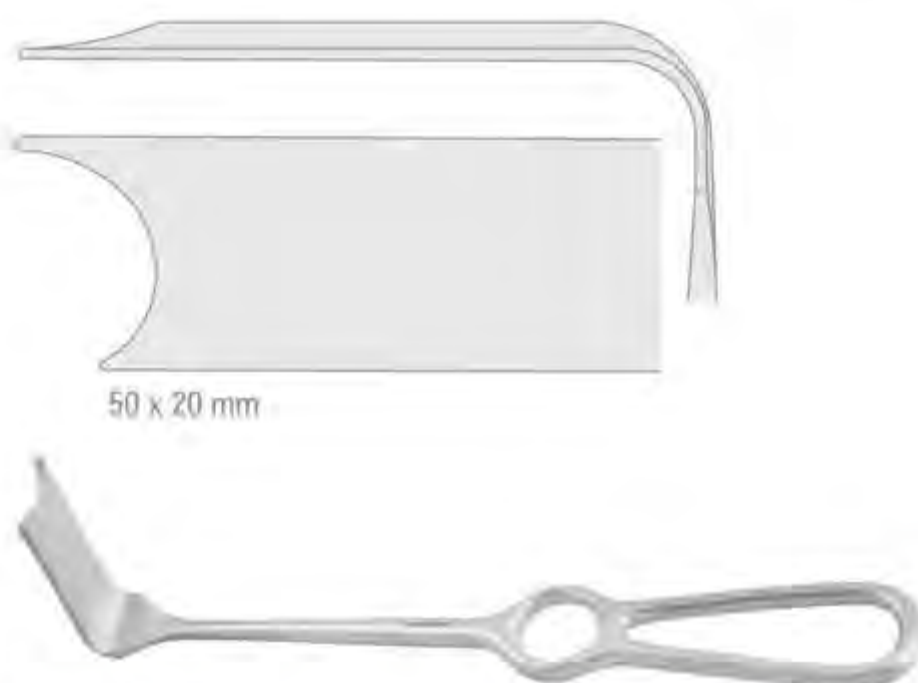

Steinhauser

10 mm	290 mm / 11 1/2"	F62-373-29R
-------	------------------	-------------

RETRACTORS ZYGOMATIC SOFT TISSUE

For exposing the zygomatic crest and retracting soft tissue.

Steinhauser

Left	235 mm / 9 1/4"	F62-379-01R
Right	235 mm / 9 1/4"	F62-379-02R

TERRY INSTRUMENTS

The Honburg version of Terry instruments are not implied to be an exact version of any other system, nor do we claim any endorsement of Dr. Terry.

F62

INSTRUMENTS
CRANIO-MAXILLO-FACIAL SURGERY

CLAMPS MYLOHYOID MUSCLE ATRAUMATIC

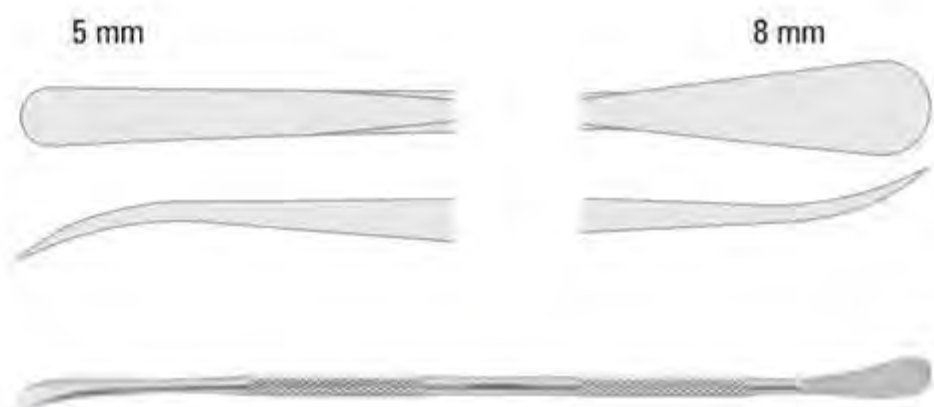

For effective detachment of mylohyoid muscle from its attachment to the mandible in mouth floor lowering procedure. The right and left clamps also allow better retraction and a clear view.

Terry		
Fig. 1	170 mm / 6 3/4"	F62-603-01R
Fig. 2	170 mm / 6 3/4"	F62-603-02R

ELEVATOR ALVEOLAR FLAP

For lifting alveolar flap and manipulating Hydroxyapatite (HA) grafts.

Terry		
5 / 8 mm	170 mm / 6 3/4"	F62-610-17R

ELEVATOR SUBPERIOSTEAL

For subperiosteal dissection through small incisions or for preparing tunnels for placement of Hydroxyapatite (HA).

Terry		
3 / 7 mm	180 mm / 7"	F62-612-18R

■ INTRODUCER WIRE

For circummandibular wiring transorally in sagittal split osteotomy (SSO) or Intraoral vertical ramus osteotomy (IVRO) procedure.

Terry

2 mm	170 mm / 6 3/4"	F62-620-17R
------	-----------------	-------------

■ OSTEOTOMES NASAL SINGLE GUARDED

For cutting the lateral nasal wall in LeFort I osteotomy. The thin blade makes a fine cut with very little wedging. The probe end of the osteotome reduce the danger of nasal mucosal lacerations.

Fig. 1
5 mm

Fig. 2
7 mm

Terry

Fig. 1	190 mm / 7 1/2"	F62-628-05R
Fig. 2	190 mm / 7 1/2"	F62-628-07R

■ PACKERS GRAFT

For placement of Hydroxyapatite (HA) particles into prepared tunnels. The small diameters and concave shape of tips work through small incisions to facilitate the graft placement.

Terry

3 mm	130 mm / 5 1/8"	F62-633-13R
------	-----------------	-------------

Terry

4 / 6 mm	110 mm / 4 3/8"	F62-634-01R
----------	-----------------	-------------

Terry

4 mm	110 mm / 4 3/8"	F62-634-02R
------	-----------------	-------------

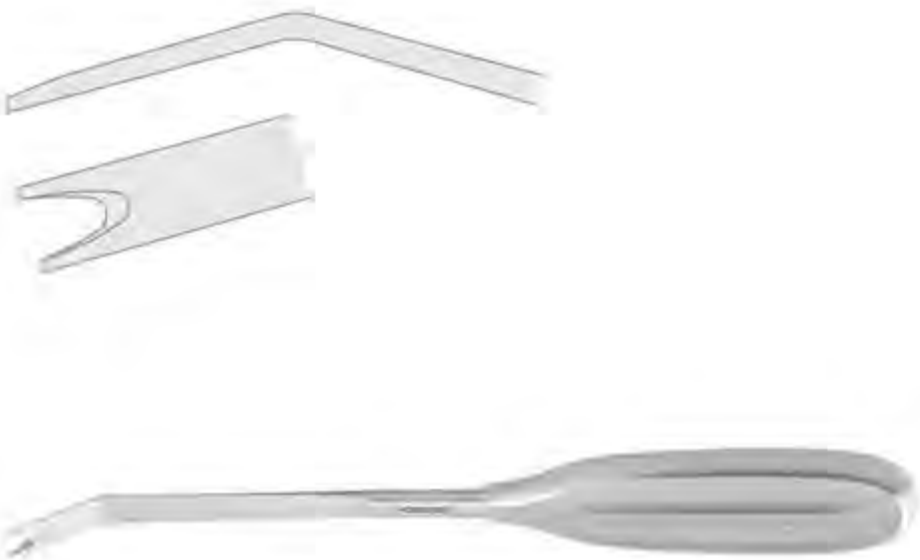

Terry

6 mm	110 mm / 4 3/8"	F62-634-03R
------	-----------------	-------------

PUSHER RAMUS V-SHAPE

For control of the ramus fragment in procedure of transoral open reduction of mandibular angle fractures with interalveolar / upper border wiring.

Terry		
8 mm	240 mm / 9 ½"	F62-637-24R

RETRACTOR CHANNEL

For protection of soft tissue and neurovascular bundle during sagittal split of the mandible. Useful for retracting and improving view of the surgical site in the mandibular neurovascular bundle decompression procedure. The length of the working end is shorter than conventional channel retractors, which allows easier working in the inferior border aspect of the mandible with rotary or hand instruments.

Terry		
8 mm	165 mm / 6 ½"	F62-641-16R

RETRACTORS DUCT

For fixing and lifting of the exposed salivary ducts.

Terry		
Fig. 1	145 mm / 5 ¾"	F62-643-01R
Fig. 2	145 mm / 5 ¾"	F62-643-02R

WEDGE OCCLUSAL

For opening mouth of patient with maximum restriction of mandibular function prior to introducing mouth gag. The front edge tapers to 2mm for easy insertion.

Terry		
20 mm	140 mm / 5 ½"	F62-650-14R

TESSIER INSTRUMENTS

The Honburg version of Tessier instruments are not implied to be an exact version of any other system, nor do we claim any endorsement of Dr. Tessier.

F62

INSTRUMENTS
CRANIO-MAXILLO-FACIAL SURGERY

■ AWLS ILLIAC CREST

For wiring together two halves of illiac crest after bone graft is taken from underneath, available in three curvatures and lengths.

Fig. 1

Fig. 2

Fig. 3

Tessier

Fig. 1	195 mm / 7 3/4"	F62-705-01R
Fig. 2	205 mm / 8 1/8"	F62-705-02R
Fig. 3	210 mm / 8 1/4"	F62-705-03R

■ AWLS / PERFORATORS TRANSNASAL

For making a hole through the lacrymal crest into the frontal processus of the maxilla from one side to the other for trans-nasal medial canthopexy. The triangle point is sharp.

Tessier

4.5 mm Ø	165 mm / 6 1/2"	F62-708-16R
2.5 mm Ø	210 mm / 8 1/4"	F62-708-21R

■ CALIPER CRANIOFACIAL

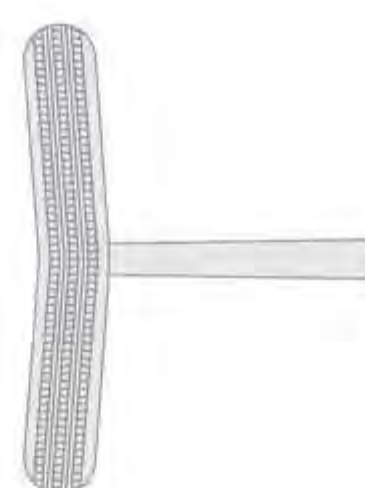

Tessier

0 - 200 mm	260 mm / 10 1/4"	F62-720-26R
------------	------------------	-------------

■ CLAMP SCALP ATRAUMATIC

For use in craniofacial surgery and in frontal or temporal lifting procedures, pulling forehead backward and holding scalp retracted downward.

The clamp provides hemostasis of the anterior edge of coronal incision. The atraumatic jaws and elastic shanks provide sufficient pressure and secure grip yet do not damage the scalp.

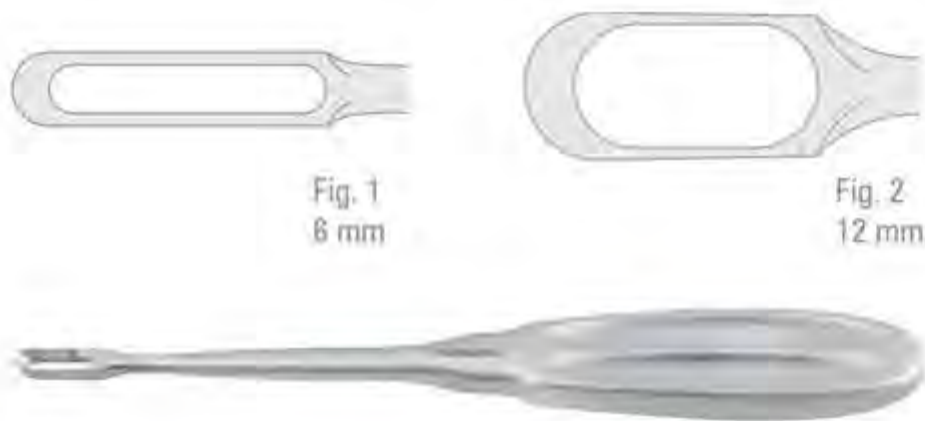

Tessier

T-Shape	135 mm / 5 3/8"	F62-725-13R
---------	-----------------	-------------

■ CURETTES BONE

For removal of fat in the submaxillary and submental areas or taking cancellous bone from the tibial epiphysis or from under the iliac crest through a small skin incision.

Tessier			
Fig. 1	220 mm / 8 3/4"	F62-735-06R	
Fig. 2	215 mm / 8 1/2"	F62-735-12R

■ ELEVATORS PERIOSTEAL

Tessier			
Fig. 1	180 mm / 7"	F62-753-01R	
Fig. 2	180 mm / 7"	F62-753-02R	

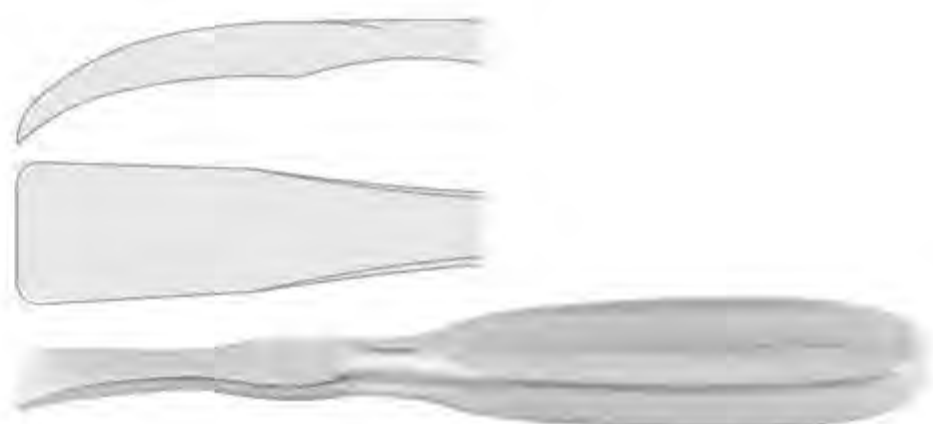

■ ELEVATORS PERIOSTEAL

Tessier			
6 mm	180 mm / 7"	F62-755-06R	
7 mm	180 mm / 7"	F62-755-07R	
9 mm	180 mm / 7"	F62-755-09R	
11 mm	180 mm / 7"	F62-755-11R	

■ ELEVATORS PERIOSTEAL HEAVY PATTERN

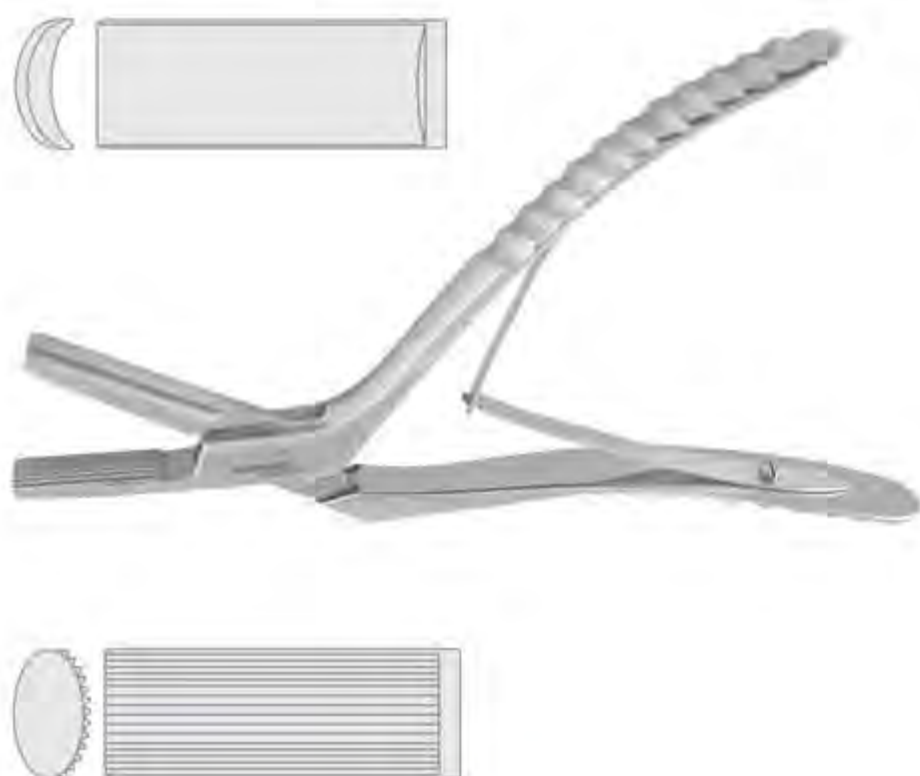

For elevation of the periosteum from the calvaria, the ramus or body of the mandible or when taking grafts from the tibia, the ribs or ilium.

Tessier			
12 mm	185 mm / 7 1/4"	F62-757-12R	
14 mm	185 mm / 7 1/4"	F62-757-14R	
12 mm	205 mm / 8 1/8"	F62-759-12R	
16 mm	205 mm / 8 1/8"	F62-759-16R	

■ FORCEPS BONE BENDING / CONTOURING

For making parallel grooves on the septal or conchal cartilages. The cartilage grafts can be thinned for replacing the collapsed alar cartilages and they can be bent for elevating a depressed nasal dorsum.

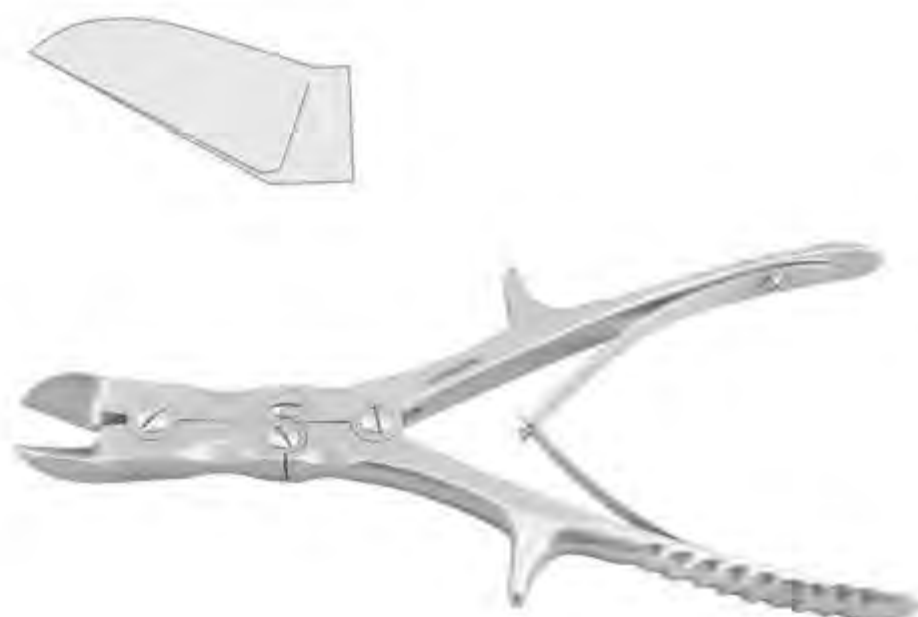

Tessier

Sideways 195 mm / 7 3/4" F62-767-19R

■ FORCEPS BONE CUTTING

For cutting all cortical grafts, including calvarial and mandibular grafts. Heavier pattern will deliver maximum cutting pressure required.

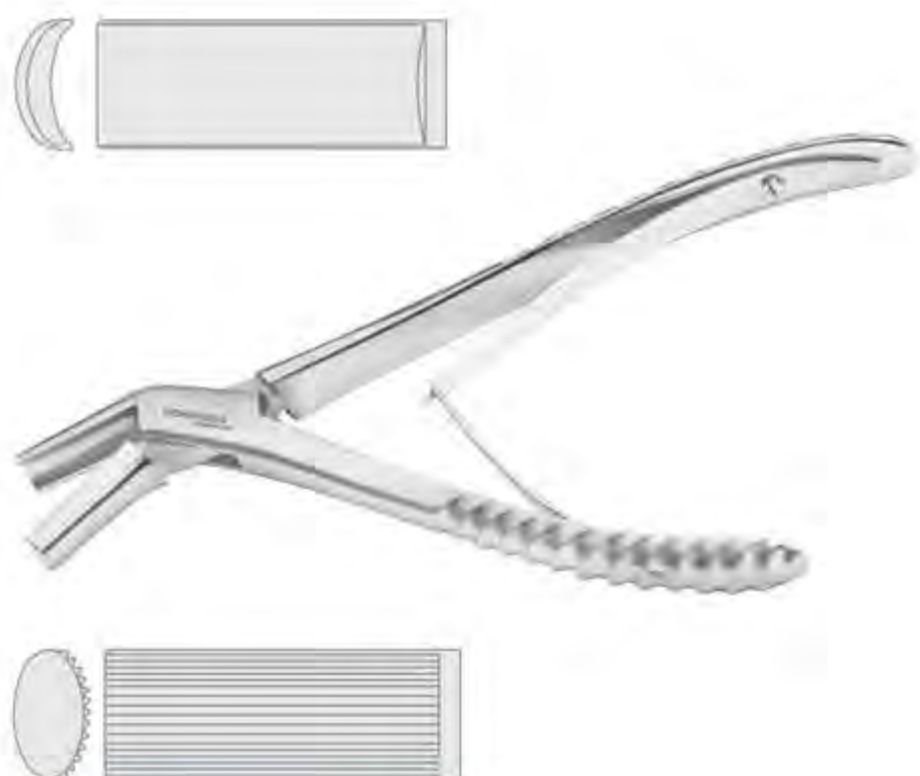

Tessier

Angled 215 mm / 8 1/2" F62-775-21R

■ FORCEPS BONE BENDING / CONTOURING

For bending ribs or iliac grafts and also calvarial grafts to proper curvature, the angular blades allow better handling and view of the graft when carving.

Tessier

Sideways 220 mm / 8 3/4" F62-769-22R

■ FORCEPS NASAL BONE CUTTING

For trimming nasal bones or septal cartilage, blades will cut to the very tip.

Tessier

Slim Pattern 205 mm / 8 1/8" F62-780-20R

■ FORCEPS BONE GRAFT HOLDING

For providing a good grasp of the bone when taking and shaping bone grafts. The rigid semi-parallel blades are thin enough to be placed beneath the soft tissue and the bone. One blade is slotted for drilling holes prior to osteosynthesis.

Tessier

200 mm / 8"

F62-785-20R

■ FORCEPS BONE HOLDING

For the zygomatic bone, the body or angle of the mandible, the inframandibular rim in a genioplasty procedure and any additional types of bone grafts carved with burrs or bone cutting forceps. Also used for stabilizing the head in craniofacial procedure.

Tessier

5 mm

190 mm / 7 1/2"

F62-789-19R

■ FORCEPS BONE HOLDING

For the zygomatic bone, the body or angle of the mandible, the inframandibular rim in a genioplasty procedure and any additional types of bone grafts carved with burrs or bone cutting forceps. Also used for stabilizing the head in craniofacial procedure.

Tessier

5 mm

165 mm / 6 1/2"

F62-789-16R

■ FORCEPS BONE SPREADING

For introducing into the osteotomy line when access is difficult or pulling with bone holding forceps is not convenient.

Tessier

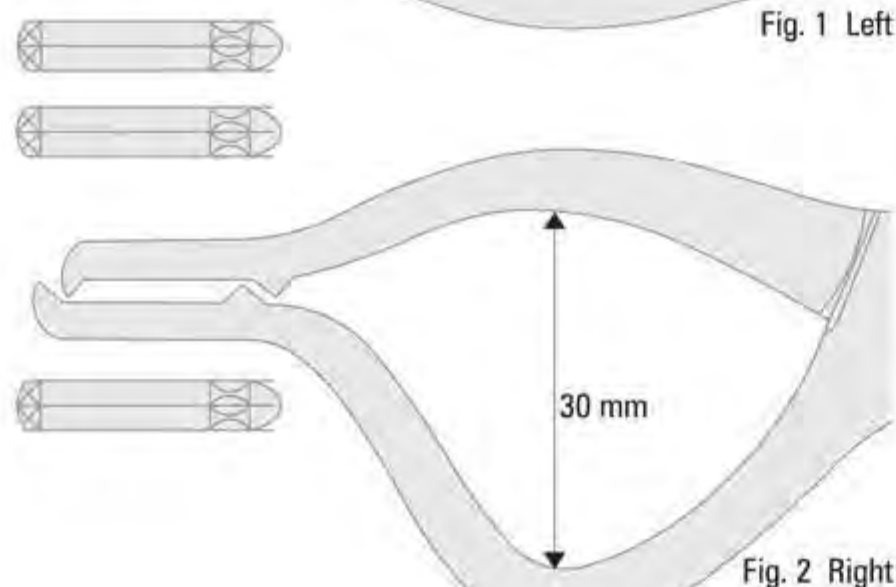

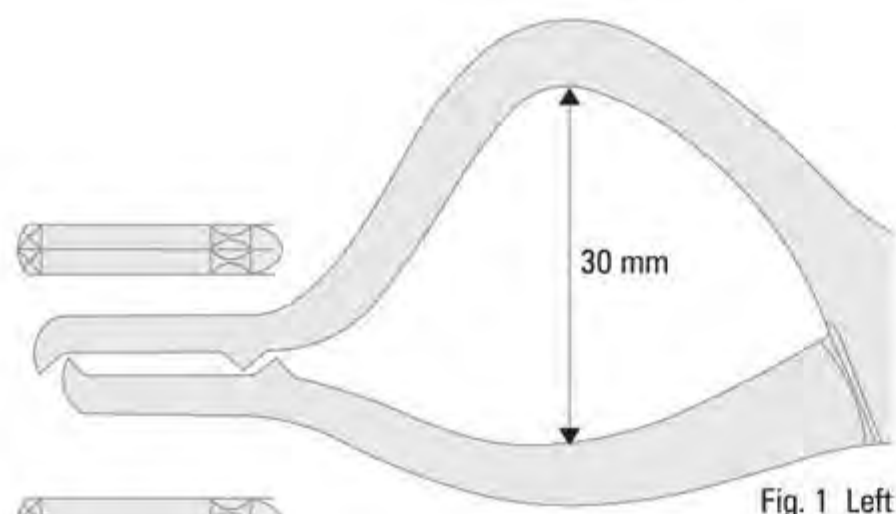

7 mm

170 mm / 6 3/4"

F62-795-17R

■ FORCEPS DISIMPACTION

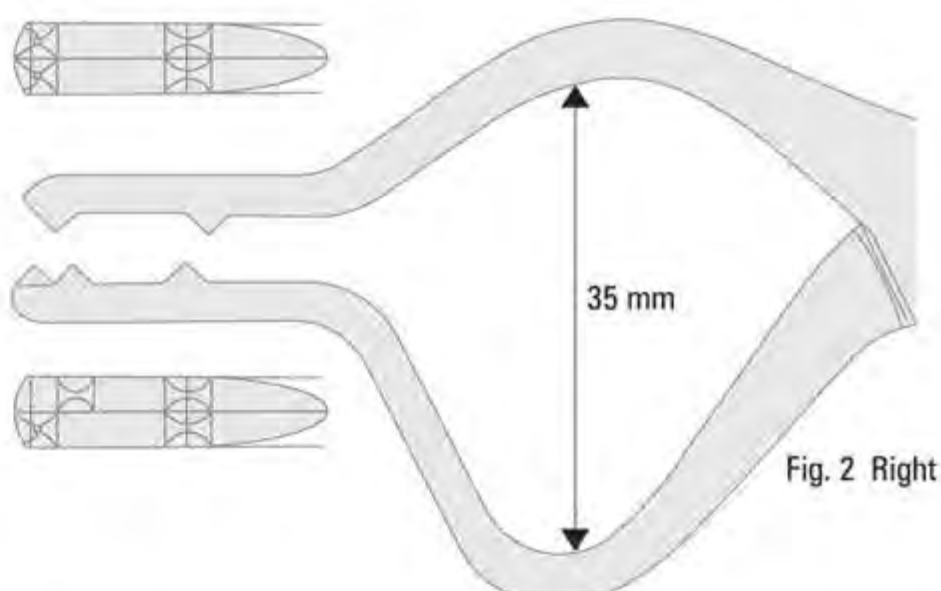

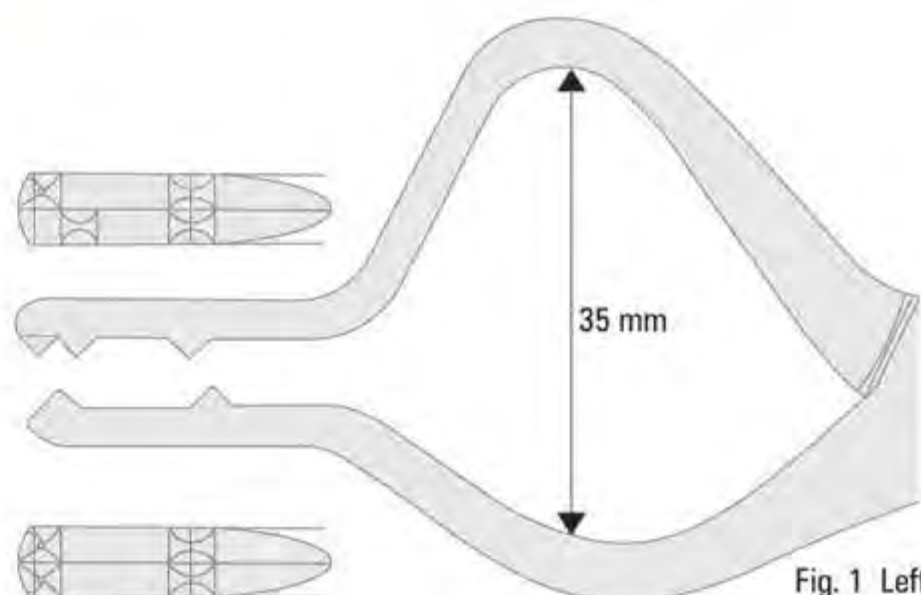

For maxillary advancement in Le Fort I, II or III procedures. The forceps are side specific and used in pair. They allow the application of great amounts of force to disimpact and reposition the maxilla and midface. Oral blade of forceps has large curvature to prevent damage to upper anterior dentition

Tessier

Fig. 1	220 mm / 8 3/4"	F62-805-01R
Fig. 2	220 mm / 8 3/4"	F62-805-02R

Tessier

8 mm	200 mm / 8"	F62-820-08R
15 mm	200 mm / 8"	F62-820-15R

■ HANDLE TREPHINE

Tessier

130 mm / 5 1/8"	F62-826-13R
-----------------	-------------

■ HOOKS BONE

For approximation and wiring behind the zygoma, lateral orbital rim, inframandibular segment (genioplasty), sigmoid notch or ramus. It can be used behind the tuberosity of the maxilla. The sharp serrations prevents slippage.

Tessier	Black Finish	Satin Finish
185 mm / 7 1/4"	F62-831-18B	F62-831-18R

■ HOOK SKIN

For grasping and firm handling of the scalp, thick flaps, the umbilicus, the lateral canthus and the corner of the mouth, it is sharp and large size.

Tessier

190 mm / 7 1/2"	F62-835-19R
-----------------	-------------

■ MOBILIZERS MAXILLARY

For separation of the maxilla from the pterygoid process, they are used alternatively on either side to rotate and advance the maxilla or midface, thus breaking or stretching the last resistances of the bone or scar tissue. Used in Le Fort I, II, III procedures, the proper curvature of the thin blades allow passing below the zygomatic bone.

■ RETRACTORS SOFT TISSUE, MALLEABLE

These retractors are double ended with slightly different widths at either end of the blades. They are malleable and thin, thus preventing the brain or eyeball from receiving exceeding pressure. They are of general application in the cranial and orbital cavities; they can also be used in the mouth.

■ SHEAR BONE / RIB

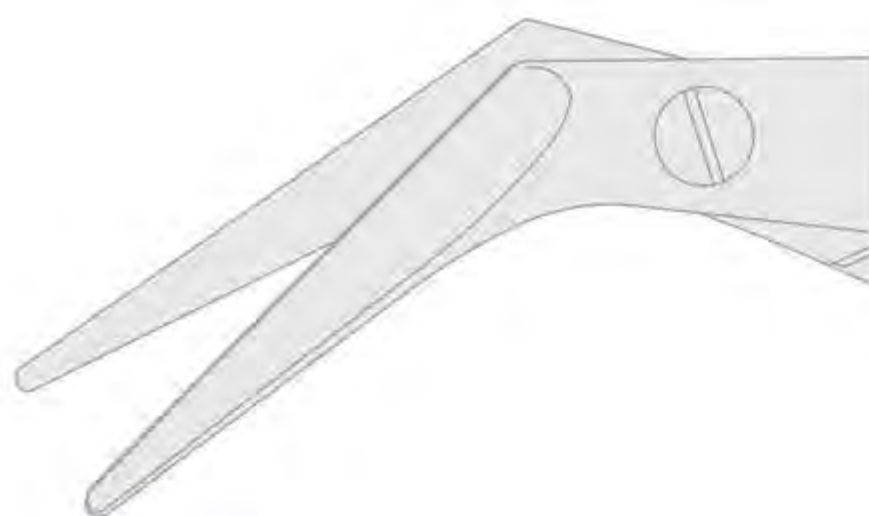

For rapid, straight craniotomy in infants and young children after dissection of the dura, the upper blade is finely serrated.

Tessier

15 ° angled	195 mm / 7 3/4"	F62-951-19R
-------------	-----------------	-------------

For cutting ribs or thin cortical iliac grafts in long strips. Also for cutting calvarial bones of young children, the upper blade is finely serrated.

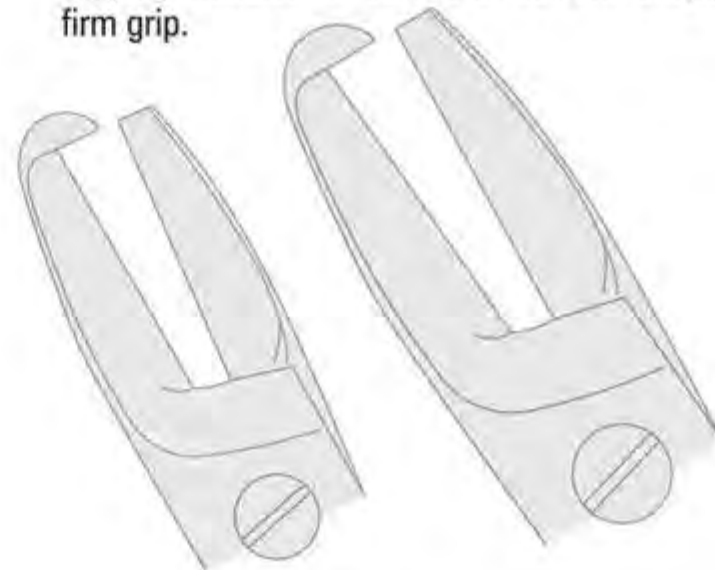

Tessier

45 ° angled	190 mm / 7 1/2"	F62-953-19R
-------------	-----------------	-------------

■ SHEARS RIB CURVED HANDLES

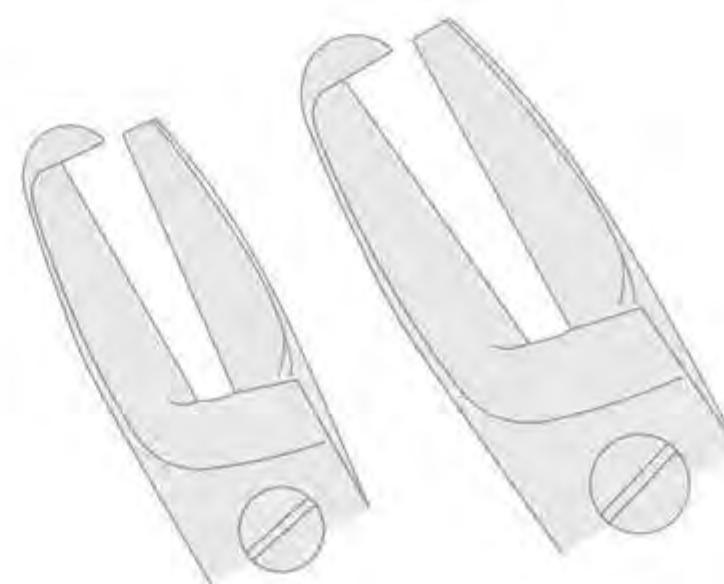

For cutting rib grafts, one hook blade prevents the rib from slipping. Handles are curved to side and deeply grooved for a firm grip.
